Geographcal Area is that area which has been surveyed and calculated by the survey of Pakistan.

Reported Area is the total physical area of the village/Deh, Tehsil or district etc.

Cultivated Area is that area which was sown atleast during the year under reference or during the previous year. Cultivated area = Net Area sown + Current fallow.

Cropped Area means the aggregate area of crops raised in a farm during the year under reference including the area under fruit trees.

Current Fallow is that area which is vacant during the year under reference but was sown at least once during the previous year.

Net Sown is that area which is sown atleast once during (Kharif & Rabi) the year under reference.

Area sown more than once is the difference between the total cropped area and the net area sown.

Cultureable Waste is that uncultivated farm area which is fit for cultivation but was not cropped during the year under reference nor in the year before that.

Forest is the area of any land classed or administered as forest under any legal enactment dealing for forests. Any cultivated area which may exist within such forest should be excluded (and shown under heading cultivated area).

Area not available for cultivation is that un-cultivated area of the farm which is under farm home-steads, farm Roads and other connected purposes and therefore not available for cultivation.
